BOX-LIKE CONTAINER WITH AN INTERPENETRATING STRUCTURE AND PROCESS FOR THE REALIZATION THEREOF

ABSTRACT

A box-like hollow body, particularly a container of various shapes and size, comprising at least an inner hollow body 3 and an outer hollow body 2, interpenetrating with each other so as to create an integral structure with particular characteristics of mechanical resistance and ornamental, and provided with a continuous inner surface without gaps and an outer 10 surface patterned according to zones or sections.
